

ABSTRACT

[0019] This new variety '12-76-71' is new and different because of its unusual berry flavor (muscat) combined with bright red coloration and seedlessness (stenospermic berries). It differs from other red, seedless grapes such as 'Flame Seedless' (unpatented) by having a strong muscat flavor and ripening about two weeks later. It differs from other red, seedless varieties such as grapevine '3-14-71' (United States Plant Patent 8297) by ripening about two weeks earlier and by having a strong muscat flavor.
